/Ario Etienne/ Supervisory Patent Examiner, Art Unit 2157			

Continuation of 11. does NOT place the application in condition for allowance because:

(A) Applicant argues that Yu does not discloses establishing two tunneling sessions over different access networks. In regards to point (A), examiner respectfully disagrees.

In column 1, lines 56-63, Yu discloses a lookup service in a network comprises a first tunnel module that acquires communication data of a network peer. A registration table stores the communication data. A second tunnel module sends a communication request to the registration table, acquires the communication data from the registration table, and sends a communication attempt to the first tunnel based on the communication data. Indeed, Yu teaches establishing two tunneling sessions over different networks.

(B) Applicant argues that Yu does not teach the claimed tunnel access server.

In regards to point (B), examiner respectfully disagrees.

In column 3, lines 28-33, Yu discloses the service capability descriptor indicates whether the tunnel systems in peers 32 and 34 have the capability to act as a middleware server (i.e. "tunnel access server") to maintain proxy queues for the tunnels 48 and 50.

(C) Applicant argues that Yu does not disclose that the fist tunneling session is established via a first access network and a second tunneling session is established over a second access network.

In regards to point (C), examiner respectfully disagrees.

In figure 4A, Yu discloses tunnel module 18 (i.e. "first tunneling session") in A site (i.e. "first network") and tunnel module 88 (i.e. "second tunneling session") in B site (i.e. "second network")..
